The Invisible Financial Crisis

A profitable SME can still run out of cash.

The shortfall is visible weeks ahead, but nobody is looking.

Why SMEs Struggle

No finance team

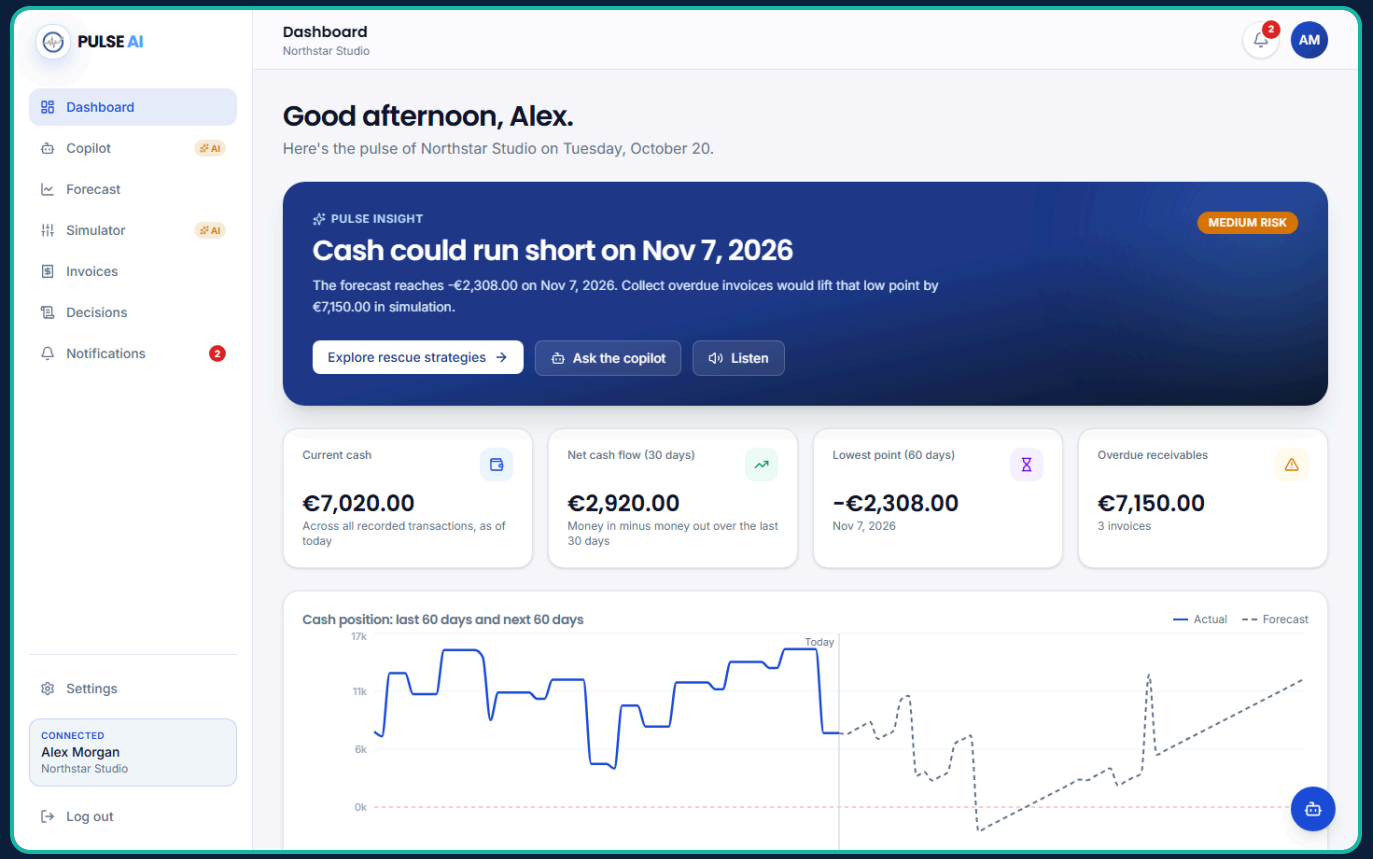

Data scattered across bank exports and sheets

Tools describe the past, not the next 60 days

Introducing PULSE AI

A cash-flow copilot that predicts, simulates, and proposes,

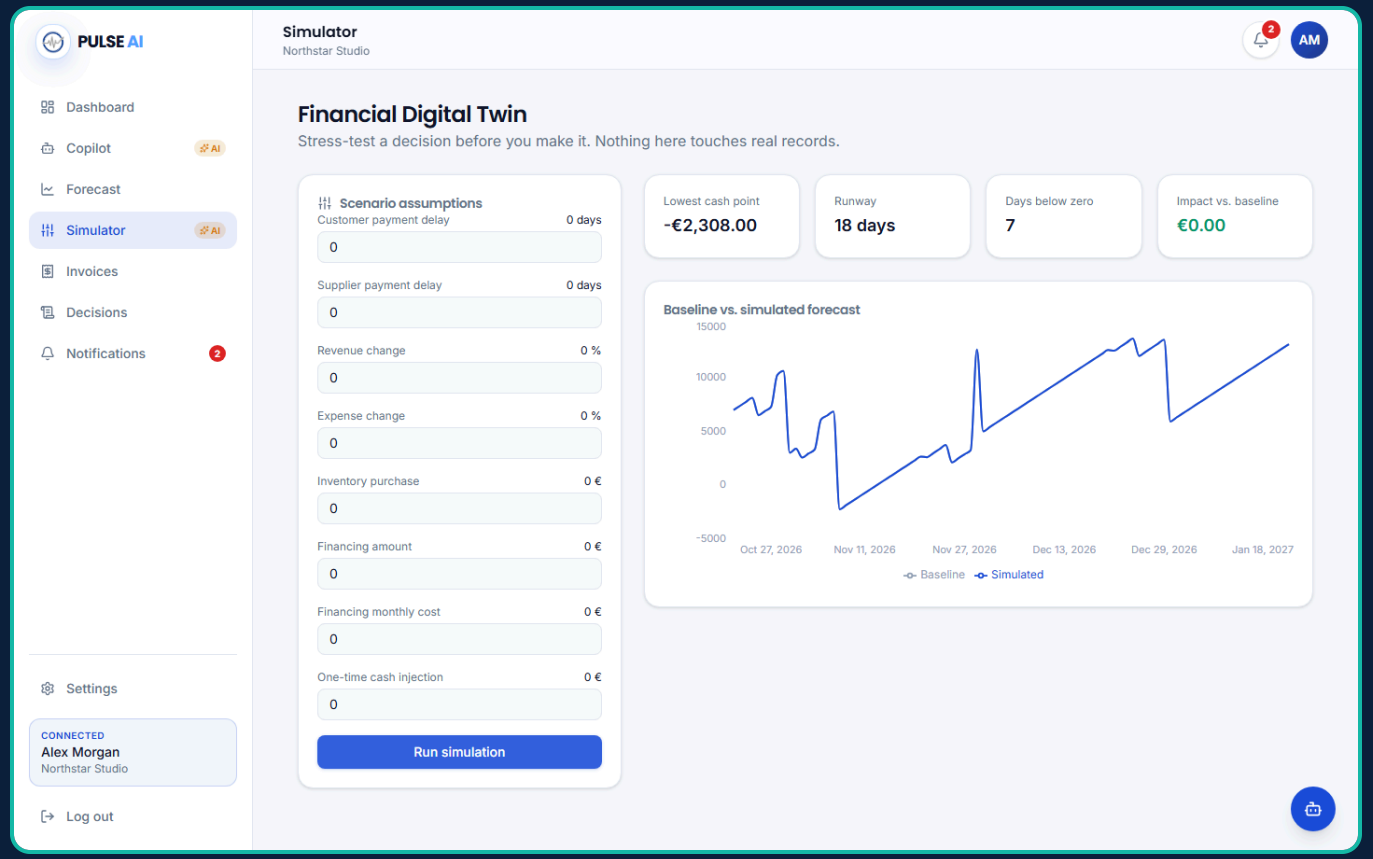

while a human keeps the final decision.

The Financial Digital Twin

Replay the business under any scenario:

customer delays, supplier terms, financing, revenue change.

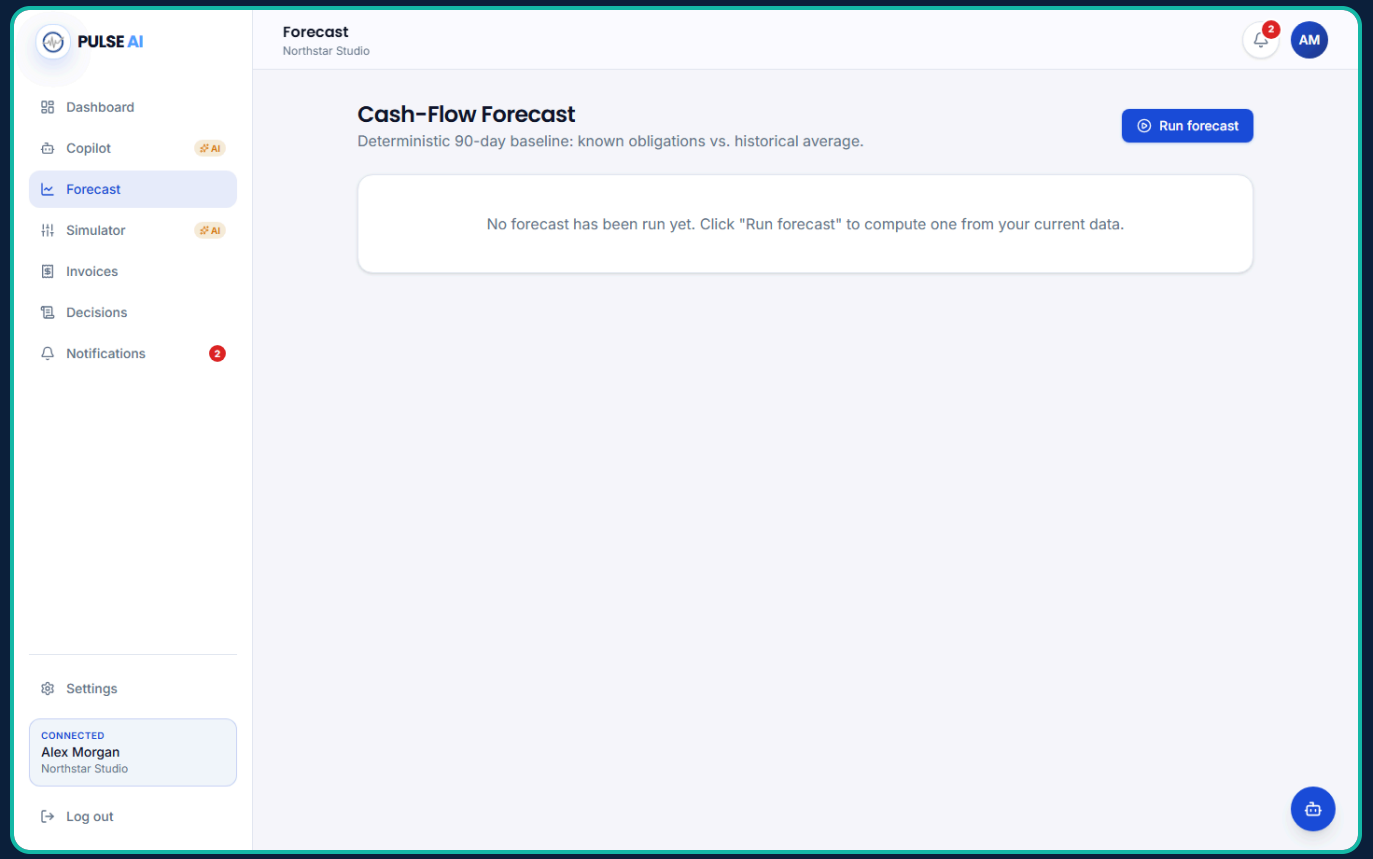

Predicting Financial Risk

Deterministic day-by-day forecast

Known flows plus uncertain baseline

Lowest point, shortfall date, risk level

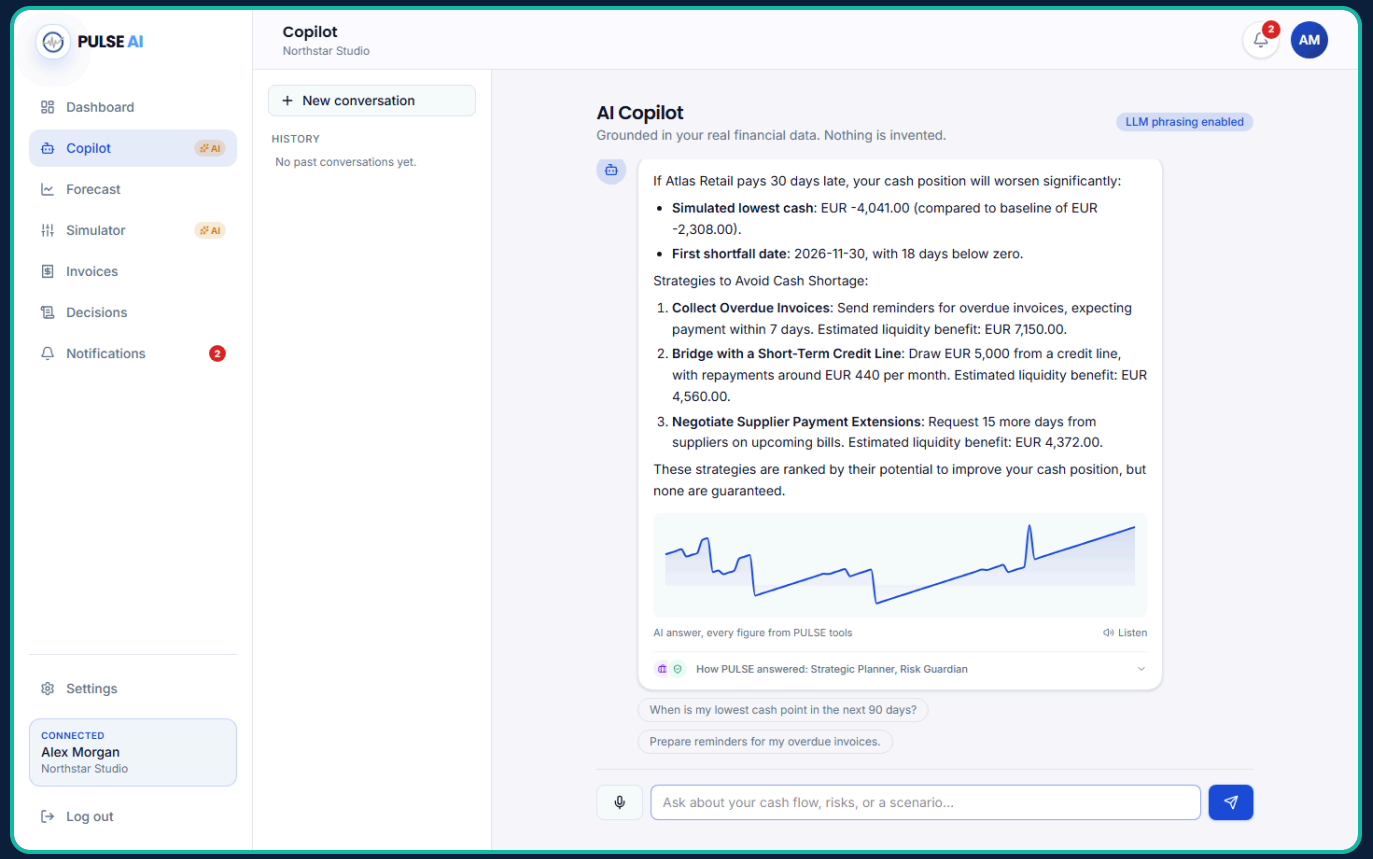

From Risk to Rescue

Agentic AI Architecture

Financial Analyst, Forecast Analyst, Strategic Planner,

Workflow Coordinator, Risk Guardian

OpenAI tool calling with deterministic fallback

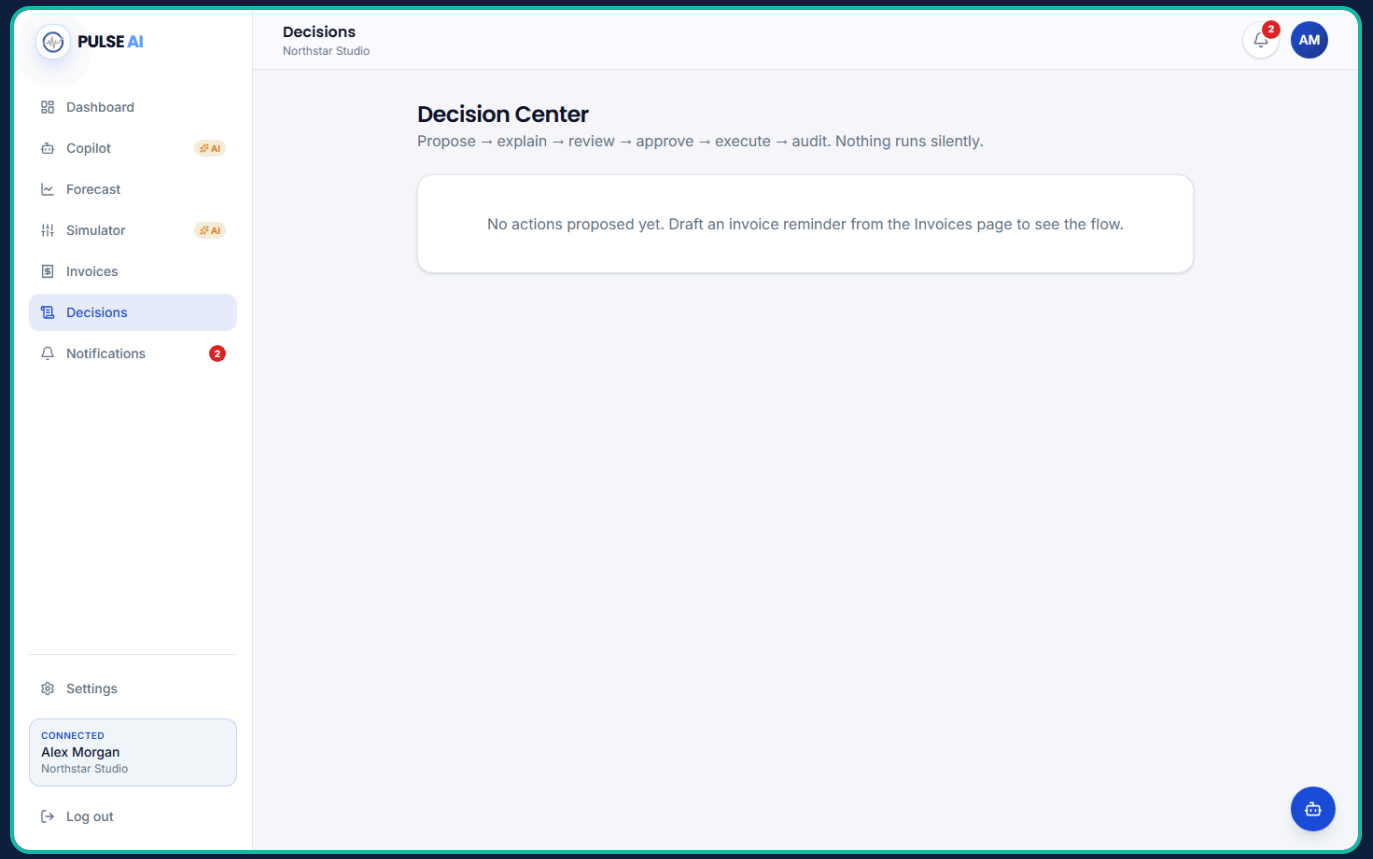

Live Demo and Execution Evidence

Propose, approve, execute, recorded in the audit log

Unapproved execution refused (409)

No webhook: QUEUED, never falsely SENT

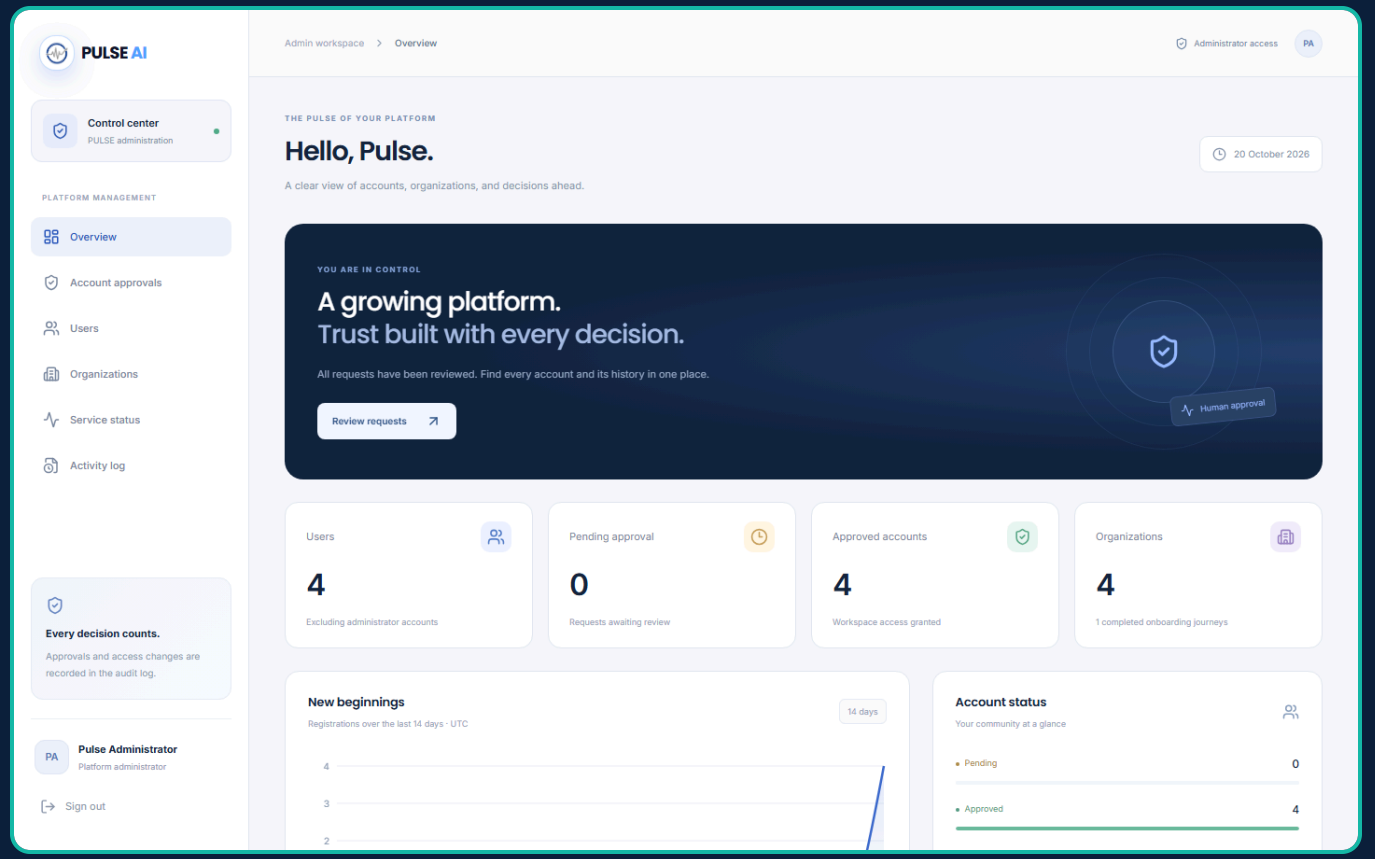

Security and Human Control

JWT, bcrypt, hashed email codes

Role tiers from VIEWER to OWNER

Admin console with account review and audit

Impact and Future Vision

Weeks of warning instead of a surprise overdraft

Next: ERP connectors (Odoo), bank feeds, MFA,

learned forecasting on top of the deterministic core
